

MSSP++

Managed Security Services Provider

MSSP++ works as an extension of your IT staff. One team runs your devices, network and cloud, watches them from our security operations center, and trains your people to stay safe online.

/01 What is included

/01

Managed IT and support

Systems, infrastructure, cloud and end-user devices, with support for everyday requests.

/02

Secure cloud adoption

Secure cloud templates and integration for moving off legacy systems safely.

/03

Endpoint and network security

Protection for networks, infrastructure and every device your people use.

/04

Centralized SOC monitoring

Your environment onboarded to our SOC, with incident recovery and stronger controls.

/05

Security awareness training

Tailored education for employees and consultants, so behavior changes too.

/06

Web filtering and monitoring

Cloud-native web filtering and online activity monitoring for student safety.

AT A GLANCE

MODEL

An extension of your IT staff, not a replacement

WATCHED BY

Our US-based security operations center

BUILT FOR

School districts, colleges, municipalities, agencies and departments of public works

START WITH

Security only, or the full managed IT service

COMPLIANCE RESULT

Insurance and school compliance: the NJ MEL Deductible Reduction Groups, cyber insurance, and CIPA, COPPA and FERPA

/02 Questions about MSSP++

Do we keep our own IT staff?

Yes, if you want to. MSSP++ is designed as an extension of your IT team, and many clients keep an internal lead who works with us.

Can we start with security only?

Yes. Start with SOC monitoring and training, and add managed IT later.

We already have vendors for some of this. Is that a problem?

No. We integrate with what you have and only replace tools when it clearly helps.

/03 Why the plus plus

A managed service provider keeps systems running. A managed security service provider watches for attacks. MSSP++ does both, and adds the part most providers skip: changing how people behave online.

- An extension of your IT staff, not a replacement
- Legacy technology modernized on a plan you can fund
- Security behavior change built into the service
- Cloud integration done securely from the start

/04 Built for schools and local government

WHAT MSSP++ ADDS

Schools and districts	Web filtering and activity monitoring for student safety, support for CIPA, COPPA and FERPA requirements, and training for staff, faculty and administrators.
Local government	Help assessing and meeting NJ MEL cyber requirements, remote work secured for staff, vendors and contractors, and continuity planning for the systems residents rely on.

/05 How onboarding works

- 01

Assess

Review your systems, devices, accounts and support arrangements.
- 02

Stabilize

Fix the urgent issues and take over day-to-day support.
- 03

Secure

Roll out endpoint, network and cloud protection and connect it to the SOC.
- 04

Improve

Modernize legacy systems and train your people on a steady schedule.

One contract for IT and security.

Start with an assessment of your systems, accounts and support arrangements, and a plan you can fund.
