DIGITAL TEAMSIX

Threat Intelligence

For water, government and schools

The threats aimed at your sector, collected automatically, stripped of false positives and scored for your risk, so your team acts on what matters this week instead of reading everything.

/01 Signal, not noise

01 Collect
Data from internal and external sources gathered and processed automatically.

02 Filter
False positives identified and dismissed before anyone spends time on them.

03 Enrich
Each alert gets real-time context and a custom risk score for your environment.

04 Act
What matters goes to your SOC analyst and into a plain-language briefing for your team.

/02 What is aimed at your sector

7 states

Water and wastewater utilities in at least seven states reported attacks on internet-facing PLCs from July 27, 2026.

FBI AND EPA, ALERT I-073026-PSA, JUL 30, 2026

82%

of K-12 schools experienced a cyber incident between July 2023 and December 2024.

K-12 DIVE, ON THE CENTER FOR INTERNET SECURITY REPORT, MAR 2025

34%

of state and local government organizations were hit by ransomware in 2024.

SOPHOS, STATE OF RANSOMWARE IN STATE AND LOCAL GOVERNMENT 2024

AT A GLANCE

SOURCES
Internal and external, collected and processed automatically

DELIVERED
Inside every SOC alert, and as plain-language briefings

FOCUS
Water and wastewater, local government and education

FOR
Your SOC analyst, your IT lead, and your leadership and board

COMPLIANCE RESULT
Threat context for your risk assessments and incident reports

/03 What you receive

/01

Enriched alerts in the SOC

Every alert your analyst sees already carries context and a risk score.

/02

Advisory triage

When a relevant advisory is published, you hear whether it affects your environment and what to do.

/03

Sector briefings

Plain-language summaries of what is targeting water, government and schools, for leadership and boards.

/04

Internal and external comparison

What we see in your environment, compared with what is happening across your sector.

/04 Who receives what

WHO	WHAT THEY RECEIVE
Your SOC analyst	Alerts that already carry context and a risk score for your environment, before anyone looks at them.
Your IT lead	Advisory triage: whether a newly published advisory affects your environment, and what to do about it.
Leadership and the board	Plain-language briefings on what is targeting your sector, and how your environment compares.

/05 Advisory triage, in practice

FBI and EPA alert I-073026-PSA, July 30, 2026

Attackers were changing IP addresses and passwords on internet-facing Rockwell MicroLogix 1100 and 1400 PLCs at water utilities. Advisory triage answers three questions within a day: do you run those controllers, can anyone reach them from the internet, and what should change this week. The Culper-I inventory and SOC findings supply the answers.

Know what is coming before it arrives.

Ask for a threat briefing for your sector, written for your leadership or board.
